

JetAir System

by AFC Finishing Systems

The JetAir System by AFC Finishing Systems is a cost effective, versatile system that significantly reduces the cure or dry time of both solvent and waterborne coatings. The results for your shop are shorter cycle times, greater output, lower energy consumption and reduced costs!

- System increases the velocity of airflow around the vehicle to up to 375 FPM. Works to speed up the rate of evaporation of solvent or water from the coating.
- Reduce flash time of waterborne basecoat to as low as 2.5 minutes... a savings of over 70%!
- System retrofits easily into any spray booth.
- Versatile air amplifiers allow for adjustment of airflow at the source. Covers the entire vehicle when used as complete system or remove individual air amplifiers to use as hand-held dryer for spot jobs.
- Complete system for as low as \$4,500 (plus installation).

JetAir System Specifications

- Total of 8 (four 1" and four 2.5") adjustable air amplifiers.
- Quick disconnects at each air amplifier.
- Air consumption (complete 8 amplifier system) is 30 CFM at 30 PSI.
