

# AFC

## Finishing Systems

A leader in the finishing industry for over 40 years.

*AFC is your total air management solution provider, manufacturing equipment for use with waterborne and solvent coatings.*

# Forty years in the industry is a testimony to AFC's success.

# AFC

## AFC Means Quality

Customer satisfaction, service, and quality.

AFC builds a large variety of booths. Our booths are supplied with three basic air flow patterns:

The **Full Downflo**: air flows straight down through the booth into a pit or basement.

The **Side Downflo**: air flows down and then to the sides near the floor.

The **Crossflo**: air flows from end to end of the booth.

We've made booths for motorhome and bus manufacturers, the aerospace industry, N.A.S.A., and a railroad.

AFC can meet your size and design requirements for most any application.

AFC booths are constructed of 18 gauge galvanized steel and overlapping/interlocking flanges which make AFC booths rugged and reliable.

AFC offers the highest airflow of any booth on the market which will give you a very high quality paint job.

All models are constructed to standards of OSHA and the NFPA. Most AFC booths are ETL listed.

### The Quadraft Spray Booth

The revolutionary **Quadraft** by AFC is truly setting the pace in the industry with amazing functionality and beautiful design. It utilizes the latest technology, computer-aided design and is the only completely turbulent-free spray booth in the market.

The **Quadraft** utilizes four exhaust fans and a proprietary basement design that creates four independent quadrants and a completely turbulent-free painting environment. The booth's double walls become the exhaust ducts through which overspray is removed.

The **Quadraft** is sold complete with AFC's energy efficient recirculating DFM800R Air Make-Up System and a fully automated touch screen control panel. Strategic placement of 18 color corrective light fixtures and a bright powder coated finish provide the perfect working environment for any painter!

*The computer designed Quadraft is a technological pacesetter as the only turbulence-free spray booth on the market today.*

# AFC will custom manufacture equipment to your exact specifications.

## The Side Downflo Spray Booth

The AFC **Side Downflo** eliminates the need for a costly pit or basement and works well for all applications.

The **Side Downflo** introduces fresh filtered air evenly through the ceiling of the booth utilizing the same intake disperser plenum used with our full downflo models. The air moves smoothly down the sides of the vehicle and then is drawn away toward the side walls near the floor.

AFC offers two unique **Side Downflo** models, including the single wall **Custom Aire Side Downflo** and the sleek, fully loaded, double wall **Side Downflo Xtreme**.

## The Full Downflo Spraybooth

AFC offers a complete line of **Downflo** spray booths, all designed with quality and functionality in mind.

Choose from the double wall **Eurostyle** or **Thermal Xtreme** models, or select the single wall **Custom Aire Downflo**. No matter which model you choose, you can be assured that each is built to the highest standards and incorporates the latest technology available.

AFC's exclusive intake disperser plenum and unique six-foot double row exhaust pit ensure even airflow and a quality finish. Color corrective lighting and energy efficient gas and electrical components provide you with a spray booth that will give excellent service for many years.
